Read the passage below and then answer questions 6 to 9.

Chicken farmers face one main challenge; the **predators**. One of the most dangerous predator is the mongoose. This is because, they kill and eat the chicken. Chicks are the prime target because they provide the least resistance. In fact, some walk directly to the predator without the knowledge of what awaits them. By the time they realise, it is too late.

Mongoose are of different breeds. There is this particular breed of mongoose that is heavier and larger in size as compared to other breeds. It kills its prey through suffocation. It has an special way of enticing the chicken into its **demise**. It hides in the bush with its body hidden in the bush but its rear end exposed. Its anal opening has a rough place that gives impression that some millet is on it. It relaxes the muscles to spread this surface wide.

The unsuspecting chicken end up thinking their lucky day of delicious millet has dawned. They run towards the '**millet**' and begin pecking on the free food. Two pecks later, the trap comes alive and captures the poor helpless chicken's head, cutting off the air supply. Not even a sound is heard. The chicken suffocates and dies.

Read the passage below and then answer questions 10 to 14.

Last holidays, I visited my elder brother Maingi, who lives in Tanzania. He had promised to take me to the Serengeti National Park where he worked as a tour guide. As I arrived he took me for lunch in a four-star hotel at the city centre. He asked me to order anything I wanted to eat. As soon as we had paid the bill, we set off for the park.

It took us roughly forty minutes to get there. Once we had paid the entrance fee, I learnt that we would tour the park on a bus. We got aboard the bus and went round the park enjoying the exciting site of many types of wild animals. It was fascinating to watch wildebeests as they crossed Mara River into the Serengeti. Later, we went back to the reception and left for my brother's house.
